PRACTICAL CLOUD TECHNOLOGY

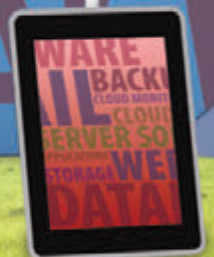

What is Cloud Technology?

Cloud technology is simply a way to describe hosting platforms that bring such popular services as Twitter and Facebook to our cell phones, tablets and computers. What you upload is available on all your devices, which pull the information down as if from the clouds above.

How can Cloud Technology help me?

Cloud technology uses a cluster of servers or a server "farm" to share data among devices and users. It's an excellent, secure way to share information with your employees, suppliers and customers, delivered it to them at their desks, on their phones or wherever they are when they need the information.
